Synthetic RESULT 1 AAW00013

Mammalian derived anti-obesity proteins which regulate fat tissue - used for treating obesity and to reduce risk for type II diabetes, cardiovascular disease and cancer. WPI; 1996-356062/36.

Example 4; Page 19; 42pp; English.

This sequence represents a modified ob proteins. ob proteins are thought to be adiposity regulating hormones. This sequence is based on the mouse ob protein sequence. Proteins such as this have improved stability, egg. acid stability, and improved adsorption characteristics compared to the wild type protein disclosed in Yiying Zhang et al, Nature 372: 425-32

```
The sequences given in AAB99490-96 represent modified ob proteins which are based on the human ob protein sequence. These protein sequences are covered by the generic sequence given in AAB99489. In these proteins, specific amino acids are substituted for the residues found in the corresponding positions in murine ob protein. These proteins are biologically active for the treatment of obesity, and are more stable than either the murine or human proteins. Individuals treated with these proteins have a reduced risk for type II diabetes, cardiovascular disease and cancer. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           YQQILTSMPSRNVIQISNDLENLRDLLHVLAFSKSCHLPWASGLETLDSLGGVLEASGYS 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cobesity polypeptides (OBP) (full length sequences represented by AAR82719 cobesity polypeptides (OBP) (full length sequences represented by AAR82719 cobesity polypeptides (OBP) (full length sequences represented by AAR82719 cond AAR82720). OBP (also known as leptin) is a hormone involved in the regulation of body weight. This sequence has effects on both food intake and energy expenditure. OBP and its analogues are useful for modifying body weight combined with known medicaments), for treating diabetes, high blood pressure or high cholesterol. The DNA encoding this sequence (and sequences complimentary to it) can be used for reducing weight for medifying body weight. This protein can be used for reducing weight for animals. Antagonists of OBP (including antibodies) are useful for animals. Antagonists of OBP (including antibodies) are useful for cancer, or for cosmetic reasons in howmans, or to product leaner food animals. Antagonists of OBP (including antibodies (Ab) can also be used in diagnostic immunoassays for the presence of OBP. The formation of Ab-OBP complexes enables in vitro evaluation of lowers or decreased complexes enables in vitro evaluation of these diseases

AAW10151 is a properly folded intermediate for the production of the biologically active obesity protein AAW22901, which has a similar structure but comprises a disulphide bridge between CY996 and CY9146.

AWW10151 is the final intermediate in the renaturation of a recombinant protein to AAW22901, which is an active anti-obesity protein for the regulation of fatty tissue and treatment of obesity related diseases, c.g. diabetes, cardiovascular disease and cancer. The production of AAW22901 via AAW10151 provides a high yield of active protein, and permits large scale manufacture with a high concentration of protein curing the folding stage. AAW10151 already has the correct tertiary structure and conversion to AAW22901 is almost quantitative, with minimal formation of S-S linked dimers or multimers, negating the need for an aggregation preventing agent. AAW10151 is stable in the presence or absence of denaturant, is soluble in phosphate buffered saline and can be purified and characterised. (Updated on 27-AUG-2003 to correct OS field.)
/note= "free Cys residue or part of mixed disulfide with, e.g. Cys, glutathione or 2-mercaptoethanol when Cys146 is free Cys residue"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  YQQILTSMPSRNVIQISNDLENLRDLLHVLAFSKSCHLPWASGLETLDSLGGVLEASGYS 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents the human obesity protein. It can be used in the formulation of the invention. The formulation of the invention is a soluble parenteral formulation that comprises an obesity protein and a preservative selected from an alkylparaben, chlorobutanol, or a mixture. The compositions can be used for treating obesity and disorders associated with obesity. In the formulations, the obesity protein remains stable and soluble at much higher concentrations and at a pH range acceptable for a soluble, parenteral formulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 YQQILTSMPSRNVIQISNDLENLRDLLHVLAFSKSCHLPWASGLETLDSLGGVLEASGYS 120

```
New compound comprising obesity protein and divalent metal cation - for treatment of obesity and associated conditions, required at lower dose
                                                                                                                   Obesity protein; diabetes; cancer; cardiovascular disease;
divalent metal cation; leader sequence.
                                                                                Obesity protein complexed with a divalent metal cation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAW10151 is a properly folded intermediate for the production of the biologically active obesity protein AAW22901, which has a similar biologically active obesity protein AAW22901, which has a similar structure but comprises a disulphide bridge between (9996 and Cys146.

AAW10151 is the final intermediate in the renaturation of a recombinant protein to AAW22901, which is an active anti-obesity protein for the protein to fatty tissue and treatment of obesity related diseases, e.g. diabetes, cardiovascular disease and cancer. The production of AAW22901 via AAW10151 provides a high yield of active protein, and permits large scale manufacture with a high concentration of protein germits large scale manufacture with a high concentration of protein curing the folding stage. AAW10151 already has the correct tertiary structure and conversion to AAW22901 is almost quantitative, with minimal formation of S-S linked dimers or multimers, negating the need for an aggregation preventing agent. AAW10151 is stable in the presence or absence of denaturant, is soluble in phosphate buffered saline and can be purified and characterised. (Updated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         YQQILTSMPSRNVIQISNDLENLRDLLHVLAFSKSCHLPWASGLETLDSLGGVLEASGYS 120

ô
The present sequence represents a human obesity protein, which is complexed with a divalent metal cation e.g. zinc and optionally has a leader sequence. It is used to treat obesity and conditions (particularly type II diabetes, cardiovascular disease and cancer) associated with it. When formulated with the metal ion, it is more active, allowing reduction in dose and thus reduction in cost and toxic side effects
                                                                                                                                                                                                                                                                                                                                                                                                                           120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAW26189, AAW26190 and AAW26192-W26201 represent obesity protein analogues contained in the compound of the invention. These sequences were synthetically created from the sequence shown in AAW26191. The compound of the invention comprises one of these obesity protein analogues complexed with a divalent metal cation (preferably Zn++). The specification does not indicate where the divalent metal cation complexes to on the obesity protein analogue. The compound of the invention (or a parenteral pharmaceutical formulation containing it) can be used to treat obesity. It may also be used to treat disorders associated with obesity such as diabetes, cardiovascular disease and cancer. The compound allows effective pharmacological treatment at lower doses that significantly because the misus of toxic or other undesirable effects. In addition, because the amount of protein administered is less, the cost of the unit dosage form to the patient is reduced
                                                                                                                                  /note= "optionally replaced with Ser, Asn, Gly, His, Pro,

It can be used in the formulation of the invention. The formulation of the invention is a soluble parenteral formulation that comprises an obesity protein and a preservative, the formulation having an ionic strength of less than about 10 mM. The compositions can be used for treating obesity and disorders associated with obesity. In the formulations the obesity protein remains soluble at much higher concentration and at the desired pH range

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents an anti obesity protein analogue used in the treatment or prevention of a condition associated with an excess of neuropeptide Y. The protein analogue is useful in the treatment or prevention of disorders or diseases pertaining to the heart, blood vessels or the renal system, conditions related to increased sympathetic nerve activity, cerebral diseases and diseases related to the central nerve activity, cerebral diseases and diseases related to the central celated to abnormal gastrointestinal motility and secretion, diseases related to abnormal gastrointestinal motility and secretion, abnormal district and food intake disorders, diseases related to sexual dysfunction and reproductive disorders, and conditions or disorders associated with obesity. The protein analogue has improved properties due to its lower isoelectric points and due to specific substitutions to the human obesity protein, and is therefore superior therapeutic agents. It is more readily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

              and a preservative selected from an alkyparaben, chlorobutanol, or a mixture. The compositions can be used for the treatment of obesity and disorders associated with obesity. In the formulations, the obesity protein analogue remains stable and soluble at much higher concentrations and at a pH range acceptable for a soluble, multi-use parenteral formulation
                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This is the amino acid sequence of human obesity protein. The invention discloses a storage-stable, soluble formulation comprising an obesity protein and a preservative, and having a pH greater than 8.0. The obesity protein used in the formulation is preferably bio-synthesised in a host cell transformed with a recombinant DNA comprising a synthetic or semisynthetic DNA encoding tge protein. The soluble formulation can be administered to mammals to treat obesity (claimed), especially humans when the obesity protein is human obesity protein. It was found that the physical stability of obesity proteins in the presence of preservatives such as phenol and cresol changes abruptly and is greatly enhanced at pH values above 8.0, such that the aggregation of obesity proteins caused by
                                                                                                                                                                                                                                                                                              YQQILTSMPSRNVIQISNDLENLRDLLHVLAFSKSCHLPWASGLETLDSLGGVLEASGYS 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Obesity protein soluble formulation for treating obesity - has pH greater than 8.0, at which aggregation of obesity proteins by preservatives is reduced allowing production of multi-use formulation.

                                                                                                                                                                           producing obesity protein analogues for use in the present invention as part of a soluble parenteral formulation. The soluble parenteral formulations comprises an obesity protein or obesity protein analogue and an anionic amphiphilic compound. The formulations are used for treating a concentration of 15-50 mg/ml. The proteins are preferably present at a concentration of 5-50 mg/ml. The anionic amphiphilic compound solubilises and stabilises the protein

                                                                                                                                                                                                   This sequence represents human leptin. The invention relates to a brain
                                                                                                                                                                                                                       function improver containing mammalian leptin as the active component. The brain function improver is useful as a treating agent for brain denaturation diseases such as Alzheimer's disease, old age dementia, pick's disease, Huntington's chorea, Parkinson's disease, Parkinson syndrome, progressive subcutaneous gliosis, progressive subcutaneous gliosis, progressive subcutaneous gliosis, progressive subcanuclear paralysis, thalamus denaturation, hereditary aphasia and myoclonus epilepsy, and other diseases causing deterioration of brain function
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 VPIQKVQDDTKTLIKTIVTRINDISHTQSVSSKQKVTGLDFIPGLHFILTLSKMDQTLAV

NyAlternate names: obese protein
Sisternate names: obese protein
Cispecies: Mus musculus (house mouse)
Cispecies: Musculus (house mouse)

NiAlternate names: hypothetical protein T29F13.6
C; Species: Arabidopsis thaliana (mouse-ear cress)
C; Accession: T01362; C84760
R; Rounsley, S.D.; Lin, X.; Ketchum, K.A.; Crosby, M.L.; Brandon, R.C.; Sykes, submitted to the BMBL Data Library, May 1998
A; Poscription: Arabidopsis thaliana chromosome II BAC T29F13 genomic sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    48

Nat. Genet. 18:213-215(1998).

Lost Genet. 18:213-215(1998).

Control May function as part of a signaling pathway that acts to regulate the size of the body fat depot. An increase in the level of LEP may act directly or indirectly on the CNS to inhibit food intake and/or regulate energy expenditure as part of a homeostatic mechanism to maintain constrancy of the adipose mass.

Constrainty Interacts with SIGLECG.

SUBCELLULAR LOCATION: Secreted.

Constrainty Defension LEP may be a cause of autosomal recessive obesity [MIM:601665].

Constrainty: Belongs to the leptin family.

CC -: SIMILARITY: Belongs to the leptin family.

CC -: DATABASE: NAME-RED Systems con/asp/gitebuilder.asp?bodyId=213".

-!- FUNCTION: May function as part of a signaling pathway that acts to
regulate the size of the body fat depot. An increase in the level
of IEP may act directly or indirectly on the CNS to inhibit food
intake and/or regulate energy expenditure as part of a homeostatic
mechanism to maintain constancy of the adipose mass (By

-!- FUNCTION: May function as part of a signaling pathway that acts to regulate the size of the body fat depot. An increase in the level of LEP may act directly or indirectly on the CNS to inhibit food intake and/or regulate energy expenditure as part of a homeostatic mechanism to maintain constancy of the adipose mass (By

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "Regulation of obese (ob) mRNA and plasma leptin levels in rhesus monkeys. Effects of insulin, body weight, and non-insulin-dependent diabetes mellitus.";
J. Biol. Chem. 271:25327-25331(1996).
-!- FUNCTION: May function as part of a signaling pathway that acts to regulate the size of the body fat depot. An increase in the level of LEP may act directly or indirectly on the CNS to inhibit food intake and/or regulate energy expenditure as part of a homeostatic mechanism to maintain constancy of the adipose mass.
-!- SUBCELLULAR LOCATION: Secreted (Probable).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Hotta K., Gustafson T.A., Ortmeyer H.K., Bodkin N.L., Nicolson M.A.,

"Molecular cloning of feline leptin cDNA.";
Submitted (APR-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: May function as part of a signaling pathway that acts to regulate the size of the body fat depot. An increase in the level of LEP may act directly or indirectly on the CNS to inhibit food intake and/or regulate energy expenditure as part of a homeostatic mechanism to maintain constancy of the adipose mass (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 VPIQKVQDDTKTLIKTIVTRINDISHTQSVSSKQKVTGLDFIPGLHPILTLSKMDQTLAV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Firstimons C.J., Schmutz S.M.;

"Exon two of the bovine obese, leptin, gene.";

Submitted (JAN-1999) to the EMBL/GenBank/DDBJ databases.

-I- FUNCTION: May function as part of a signaling pathway that acts to regulate the size of the body fat depot. An increase in the level of LEP may act directly or indirectly on the CNS to inhibit food intake and/or regulate energy expenditure as part of a homeostatic mechanism to maintain constancy of the adipose mass.

-I- SUBCELLULAR LOCATION: Secreted (Probable).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Liefers S.C.; "Genotype effects of bovine leptin mutations on pre- and postpartum
                                                                                                                                                                                                                              MEDLINE=20063685; PubMed=10594237; DOI=10.1007/s003359901180; Konfortov B.A., Licence V.E., Miller J.R.; "Resequencing of DNA from a diverse panel of cattle reveals a high level of polymorphism in both intron and exon.";

Anim. Endocrinol. 14:295-303(1997).

-I. FUNCTION: May function as part of a signaling pathway that acts to regulate the size of the body fat depot. An increase in the level of LEP may act directly or indirectly on the CNS to inhibit food intake and/or regulate energy expenditure as part of a homeostatic mechanism to maintenin constency of the adipose mass.

-I. SUBCELLULAR LOCATION: Secreted (Probable).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   22 VPIWRVQDDTKTLIKTIVTRISDISHMQSVSSKQRVTGLDFIPGLHPVLSLSKMDQTLAI

                -I- FUNCTION: May function as part of a signaling pathway that acts to regulate the size of the body fat depot. An increase in the level of LEP may act directly or indirectly on the CNS to inhibit food intake and/or regulate energy expenditure as part of a homeostatic mechanism to maintain constancy of the adipose mass.
-I- SUBCELLULAR LOCATION: Secreted (Probable).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 VPIQKVQDDTKTLIKTIVTRINDISHTQSVSSKQKVTGLDFIPGLHPILTLSKMDQTLAV

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 6, A
